**Tom Sawyer Perspectives**
For Link Analysis

---

**Oracle Partnership**
Tom Sawyer Software partners with Oracle to visualize and analyze complex data through link analysis. Link analysis is used to gain a deeper comprehension of your data by identifying relationships, allowing you to predict patterns and reveal new or hidden insights. The applications for link analysis cover a wide breadth of solutions, ranging from analyzing social networks for market analysis, detecting fraud, and improving public safety to building smart cities. No matter the challenge, Tom Sawyer Software’s superior visualization and analysis capabilities empower you to connect the dots, find the needle in the haystack, or predict the pattern to success.

Our solutions engineers have considerable Oracle expertise and have worked with key systems integrators and clients to provide robust, scalable, enterprise-class visualization and analysis solutions supported by Oracle data sources. Tom Sawyer Perspectives has comprehensive Oracle support, including Oracle Relational 12.2c, Oracle NoSQL Database, Oracle RDF Triple Stores, Oracle Siebel, Oracle Social Relationship Management, Oracle Big Data Spatial and Graph, and other modern SQL, NoSQL, and object-oriented data technologies.

---

**Applications**
- **Public Safety**
- **Location Analytics**
- **Link Analysis**
- **Social Networks**

---

**Specializations**
- ★ Public Safety
- ★ National Security
- ★ Fraud Detection
- ★ Risk Modeling
- ★ Social Network Analysis
- ★ Compliance Verification
